PROFILE

I find data insights that help organizations make faster, better-informed decisions. Over the past 3 years, I have worked across freelance and solar energy analytics, designing Python pipelines, Power BI dashboards, and statistical models used by executives and operations teams. I actively use generative AI tools and prompt engineering to accelerate analysis, write cleaner code, and produce sharper data narratives. I communicate findings clearly to both technical and non-technical audiences, and I take ownership of projects from raw data ingestion through to the final recommendation.

PROFESSIONAL EXPERIENCE

Fiverr (Virtual Platform), Data Analyst/Statistician 05/2023 – Present | Online Services

- Delivered over 4 end-to-end data analytics projects for international clients using R, Python, Excel, and SPSS.
- Applied statistical tools, hypothesis testing, and regression modelling across 5+ industries, including healthcare, retail, and social sciences.
- Built custom Excel, Power BI, and Tableau reporting tools that saved the client an average of 15 manual hours per month.
- Maintained a 5-star rating and 100% client satisfaction by turning complex statistical outputs into clear, actionable summaries.

Pleasant Solar, Assistant Data Analyst 04/2022 – 01/2025 | Islamabad, Pakistan

- Developed Python and Power BI monitoring systems for solar projects, cutting reporting turnaround from 30 days to real-time.
- Analyzed 50+ competitor segments and customer profiles, surfacing market opportunities that shaped the company's regional expansion.
- Built automated validation pipelines to detect and correct data inconsistencies at ingestion, improving report reliability significantly.
- Applied time-series modeling to 3 years of solar data, delivering 12-month infrastructure and resource projections for senior leadership.

PROJECTS

Multi-Hospital Patient Performance Analysis 📊, Power BI, Excel

- Consolidated 55,500+ patient records into a unified model tracking \$1.4B+ in treatment costs and KPIs, including average length of stay.
- Built 12+ drill-down Power BI visualizations to analyze admission trends (2019–2024), physician performance, and patient demographics.
- Delivered a centralized decision support tool covering 5 major insurance providers for improved resource planning.

Customer Behavior Analysis 📊, Python (Pandas), SQL (DuckDB), Power BI, Excel

- Cleaned 3,900 transaction records using Python and SQL with median imputation, achieving 100% data integrity.
- Identified male customers as the primary revenue driver (67.7%) and segmented 3,116 loyal shoppers for targeted retention.
- Built a Power BI dashboard visualizing KPIs, including average purchase value (\$59.80) and top category revenue (\$104K).

Saudi E-Commerce SQL Analytics, SQL (DuckDB), Python (Pandas) Present

- Designed a virtual Saudi retail dataset in Python covering thousands of employees, branches, and transactions across multiple cities.
- Solved 50 real-world business questions using SQL, covering product rankings, multi-table joins, and messy data normalization.
- Automated monthly sales growth, customer retention rate, and weekly revenue trend calculations using SQL scripts.
- Built HR and management reports, including salary gap analysis, org hierarchy tracking, and hiring velocity metrics.

EDUCATION

Master Of Philosophy, Abdul Wali Khan University 09/2021 – 10/2024 | Mardan, Pakistan

Field of Study: Statistics | **CGPA:** 3.28/4.00 | **Website:** <https://awkum.edu.pk/> 🌐

Bachelor's 4 Years in Statistics, University of Malakand 08/2017 – 09/2021 | Malakand, Pakistan

Field of Study: Statistics | **CGPA:** 3.67/4.00 | **Website:** <https://www.uom.edu.pk/> 🌐

ACADEMIC RESEARCH PROJECTS

Master of Philosophy Thesis Project, A Novel Approach Based on Robust Measures of Scale for Feature Selection in Binary Classification Problems. 08/2024 | Mardan, Pakistan

Developed an innovative feature selection technique utilizing robust scale measures and assessed its effectiveness on secondary genomic datasets. The algorithms were implemented in R, while Python was employed for advanced data visualization. Performance comparisons were made against six established methods, yielding superior accuracy and lower error rates. The tools utilized included R, Python, secondary datasets, and mathematical modeling.

Bachelor Thesis Project, Impact of Online Education on Student Academic Performance 04/2021 | Malakand, Pakistan

Conducted a comprehensive study on the impact of COVID-19 on student CGPA during the transition to online learning in 2021. Gathered and validated primary data utilizing SPSS, employing descriptive, inferential, and correlational analyses to uncover key performance factors. Developed data visualizations using Excel to effectively communicate findings. Proposed a smart lockdown internet resource management system to enhance campus connectivity. Authored a well-documented thesis that offers practical insights for educational improvement. Proficient in SPSS, Excel, primary data collection, and statistical analysis.

SKILLS

Programming and Databases — Python, R, SQL, MySQL, BigQuery, Markdown, Latex

Tools and Platforms — SPSS, Minitab, GitHub, Jupyter Notebook, VS Code, Google Workspace

Visualization and BI — Power BI, Excel (Power Pivot, DAX), Matplotlib, Seaborn, Plotly, ggplot, Tableau

Analytics Techniques — EDA, ETL, Data Cleaning, Data Wrangling, Predictive Modeling, Statistical Analysis, Reporting Automation

Machine Learning and AI — Regression, Classification, Clustering, Time Series Forecasting, Neural Networks, Feature Engineering, Model Evaluation

Professional Strengths — Strong Problem-Solving and Adaptability, Cross-Functional Teamwork and Collaboration, Mentoring/Training and Communication Skills

Generative AI and LLM Tools — ChatGPT / GPT-4 for data insight generation & report drafting, GitHub Copilot for code acceleration, Claude (Anthropic) for analytical reasoning, Prompt Engineering for structured data queries, AI-assisted EDA and anomaly detection
